

Shackle & Suspension Systems

February 1, 2008

TMC 2008 ANNUAL MEETING & EXHIBITION PRESS RELEASE

URO® Systems introduces “Innovative Products & Systems Solutions for the Transportation Industry” Product Catalog and Application Guide covering Front Shackle and Suspension Systems

URO® Systems, LLC has introduced a new product catalog and application guide highlighting it's “E” Life Series Suspension Bushings. The guide details Class 6,7, & 8 vehicles from school transportation, vocational to severe service to fire apparatus vehicles. The new catalog covers the MAINTENANCE FREE front suspension free rotational design shackle systems with detailed application information, the most comprehensive suspension application guide in the industry. Additional sections include the URO® “E” Life Series ellipsoid transverse and longitudinal torque rod replacement components, fixed torque rods and two piece torque rods, rear suspension replacement components, cross references and specialty tools.

URO® Systems, LLC is a leading innovative designer and manufacturer of specialized elastomer steering and suspension components for heavy vehicle suspension systems. The free rotational design and specially formulated elastomer of URO® Systems' products provide superior dampening and suspension control over suspension systems translating to optimum component performance.
