

Polyurethane Suspension Components

- Patented ellipsoid design
- Free rotating inner metal
- Extended fatigue durability
- Reduced maintenance

**Advanced
Articulation**

Advanced Technology

Our cast products have excellent static and dynamic properties. When it comes to processing polyurethane components, our casting systems and our manufacturing processes are technologically advanced.

The unique properties of our polyurethane provide the ideal choice for demanding applications. The superior durability, abrasion resistance, greater load-bearing capacity, cut resistance, heat build-up resistance and versatility make them popular replacement parts for rubber or steel.

Application Versatility

URO® has gone to great lengths to provide polyurethane components that have been tested to replace certain rubber components where it makes sense in the aftermarket. It is imperative that when introducing polyurethane components into the suspension system, the original equipment manufacturer's performance and articulation requirements are taken into consideration.

URO® Polyurethane Suspension Components

Features and Benefits

Features

- Patented ellipsoid design on select bushings
- Free rotational inner metal
- Metal outer sleeve for press fit
- Grooved inner metal for greater lateral retention
- Maintenance free
- Advanced testing protocol
- Chemical resistant to a variety of road contaminants

Benefits

- Provides advanced articulation
- Promotes longer life
- Requires no clocking
- Provides ease of installation
- Provides a trouble-free solution

TD5050150L Hendrickson
Bar Pin End Bushing

TD839310 Kenworth Air
Glide Sway Bar Bushing

TD46268L Freightliner
Airliner Beam Bushing
