

Polyurethane Spring Eye Bushings Components

- Free rotating inner metal
- Extended fatigue durability
- Reduced maintenance

**Advanced
Articulation**

Advanced Technology

Our cast products have excellent static and dynamic properties. When it comes to processing polyurethane components, our casting systems and our manufacturing processes are technologically advanced.

The unique properties of our polyurethane provide the ideal choice for demanding applications. The superior durability, abrasion resistance, greater load-bearing capacity, cut resistance, heat build-up resistance and versatility make them popular replacement parts for rubber or steel.

Application Versatility

URO® has gone to great lengths to provide polyurethane components that have been tested to replace certain rubber components where it makes sense in the aftermarket. It is imperative that when introducing polyurethane components into the suspension system, the original equipment manufacturer's performance and articulation requirements are taken into consideration.

URO® Polyurethane Spring Eye Bushings

Features and Benefits

Features

- Free rotational inner metal
- Metal outer sleeve for press fit
- Grooved inner metal for greater lateral retention
- Maintenance free
- Advanced testing protocol
- Chemical resistant to a variety of road contaminants

TD46263L FREIGHTLINER
SPRING EYE

TD5253L INTERNATIONAL
SPRING EYE

Benefits

- Provides advanced articulation
- Promotes longer life
- Provides ease of installation
- Provides a trouble-free solution

TD59295 KENWORTH
SPRING EYE

TD46212L FREIGHTLINER
